GooLED-CIT-8630 Pin Fin Heat Sink Φ 86.5mm for Citizen

Features VS Benefits

- * The GooLED-CIT-8630 Citizen Pin Fin LED Heat Sinks are specifically designed for luminaires using the Citizen LED engines.
- * Mechanical compatibility with direct mounting of the LED engines to the LED cooler and thermal performance matching the lumen packages.
- * For spotlight and downlight designs from 1,200 to 3,200 lumen.
- * Thermal resistance range R_{th} 2.5°C/W.
- * Modular design with mounting holes foreseen for direct mounting of citizen COB series.
- * Diameter 86.5mm - standard height 30mm Other heights on request.
- * Forged from highly conductive aluminum.

Zhaga LED engine and radiator assembly is a unified future international standardization

- * Below you find an overview of Citizen COB's and LED modules which standard fit on the Pin Fin LED Heat Sinks.
- * In this way mechanical after work and related costs can be avoided, and lighting designers can standardize their designs on a limited number of LED Pin Fin LED Heat Sink.

Ideas are made of light

Citizen LED Modules directly Mounting Options

Citizen COB version 4, version 5, version 6 Series:

- CLU046-12xxxx; CLU048-12xxxx;
- CLU046-18xxxx; CLU048-18xxxx;

Citizen High intensity COB Series:

- CLU731-12xxxx;

With the Zhaga Book 3 holders for the green indicator marks.

BJB holder: 47.319.2030.50; AAG.STUCCHI: 8102-G2

Without the holders for the blue indicator marks.

Direct mounting with machine screws M3x6.5mm.

Citizen LED Modules directly Mounting Options

Citizen COB version 4, version 5, version 6 Series:

- CLU036-12xxxx;
- CLU038-12xxxx;

Citizen High intensity COB Series:

- CLU721-12xxxx;
- CLU711-12xxxx;

With the Zhaga Book 3 holders for the green indicator marks.

BJB holder: 47.319.2021.50; AAG.STUCCHI: 8101-G2

Without the holders for the red indicator marks.

Direct mounting with machine screws M3x6.5mm.

With the LEDiL products:

Olivia series: FN14637-S

Ronda series: FN15xxx-xx;

Mounting Options and Drawings & Dimensions

Example:GooLED-CIT-8630-B-1,2

Example:GooLED-CIT-86 **1** - **2** - **3**

- 1** Height (mm)
- 2** Anodising Color
 - B-Black
 - C-Clear
 - Z-Custom
- 3** Mounting Options - see graphics for details Combinations available
Ex.order code - 12
means option 1 and 2 combined

Notes:

- Mentioned models are an extraction of full product range.
- For specific mechanical adaptations please contact MingfaTech.
- MingfaTech reserves the right to change products or specifications without prior notice.

GooLED

GooLED-CIT-8630 Pin Fin Heat Sink $\Phi 86.5\text{mm}$ for Citizen

The product data table

	Model No.	GooLED-CIT-8630
	Heatsink Size	$\Phi 86.5 \times H30\text{mm}$
	Heatsink Material	AL1070
	Finish	Black Anodized
	Weight (g)	152.0
	Dissipated power (T_{hs-amb},50°C)	20.0 (W)
	Cooling surface area (mm²)	48926
	Thermal Resistance (R_{hs-amb})	2.5 (°C/W)

The thermal data table

* Please be aware the dissipated power Pd is not the same as the electrical power Pe of a LED module.

* To calculate the dissipated power please use the following formula: $P_d = P_e \times (1 - \eta_L)$.

Pd - Dissipated power ; Pe - Electrical power ; η_L = Light efficiency of the LED module;

Dissipated Power Pd(W)	Pd = Pe x (1- η_L)	Heat sink to ambient thermal resistance R _{hs-amb} (°C/W)	Heat sink to ambient temperature rise T _{hs-amb} (°C)
		GooLED-CIT-8630	
6.0		4.00	24.0
12.0		2.92	35.0
18.0		2.56	46.0
24.0		2.33	56.0
32.0		2.03	65.0

*The aluminum substrate side of the package outer shell is thermally connected to the heat sink via TIM (Thermal interface material).

MingFa recommends the use of a high thermal conductive interface between the LED module and the LED cooler.

Either thermal grease, A thermal pad or a phase change thermal pad thickness 0.1-0.15mm is recommended.

*Thermal resistance is a heat property and a measurement of a temperature difference by which an object or material resists a heat flow.

Geometric shapes are different, the thermal resistance is different. Formula: $\theta = (T_{\text{hs}} - T_{\text{a}}) / P_d$

θ - Thermal Resistance [°C/W] ; T_{hs} - Heatsink temperature ; T_{a} - Ambient temperature ;

*The thermal resistance between the junction section of the light-emitting diode and the aluminum substrate side of the package outer shell is $R_{\text{junction-case}}$, the thermal resistance of the TIM outside the package is $R_{\text{interface (TIM)}}$ [°C/W], the thermal resistance with the heat sink is $R_{\text{heatsink-ambient}}$ [°C/W], and the ambient temperature is T_{ambient} [°C].

*Thermal resistances outside the package $R_{\text{interface (TIM)}}$ and $R_{\text{heatsink-ambient}}$ can be integrated into the thermal resistance $R_{\text{case-ambient}}$ at this point. Thus, the following formula is also used:

$$T_{\text{junction}} = (R_{\text{junction-case}} + R_{\text{case-ambient}}) \cdot P_d + T_{\text{ambient}}$$
