# **Chapter 1 Introduction**

# **1.1 Product Overview**

HP852A series products are HIPRO's new breakthrough all-in-one devices which integrate encoding (MPEG-2 HD/SD, MPEG-4/AVC H.264 HD/SD) and modulating to convert V/A signals into DVB-C RF output. It has equipped with 4 SDI (4 HDMI optional) channels input and 1 ASI input and output with 2 ASI ports and 1 UDP IP port.

Delay problem has been greatly reduced to achieve an extremely low value from the encoding progress to the decoding terminals.

It adopts inner drawer-type structural design which greatly facilitates the change of encoding modules (HDMI/SDI/...) as needed.

The signals source could be from satellite receivers, closed-circuit television cameras, Blue-ray players, and antenna etc. Its output signals are to be received by DVB-C TVs or STBs and etc.

### **1.2 Key Features**

- MPEG2 & MPEG4 AVC/H.264 HD/SD encoding
- Up to 1920\*1080@50P/60P supported (MPEG4 AVC/H.264 HD)
- Up to 1920\*1080@50I/60I supported (MPEG2 HD)
- 4\* SDI input; 1\*ASI input for re-mux; 1\*RF input for mix
- 4\* DVB-C RF out (4 carriers combined output)
- Support 4 \* SPTS output
- **Extremely low delay**
- LCN support (Logical Channel Number)
- Excellent modulation quality MER≥42dB
- RF Frequency range 30Mhz~960Mhz
- LCD display, Remote control and firmware
- Web NMS management; Updates via web
- Lowest cost per channel

. . . . . . . . . . . . . . .

# **1.3 Specifications**

### Encoding Section

Video	
Encoding	MPEG2; MPEG4 AVC/H.264
Input	SDI*4
	1920*1080_60P, 1920*1080_50P, (-for MPEG4 AVC/H.264)
Decolution	1920*1080_60i, 1920*1080_50i,
Resolution	1280*720_60p, 1280*720_50P
	720*480_60i, 720*576_50i
Audio	
encoding	MPEG1 Layer II, MPEG2-AAC, MPEG4-AAC
Sample rate	48KHz
Bit rate	64kbps, 96kbps,128kbps, 192kbps, 256kbps, 320kbps
DVB-C Modulator Sec	tion
Standard	J.83A , J.83B, J.83C
MER	≥42dB
RF frequency	30~960MHz, 1KHz step
Symbol rate	5.000~9.000Msps adjustable
RF output level	-30~ -10dbm (81~97 dbµV), 0.1db step
J.83A	
Constellation	16/32/64/128/256QAM
bandwidth	8M
J.83B	
Constellation	64QAM/ 256QAM
bandwidth	6M
J.83C	
Constellation	64QAM/ 256QAM
bandwidth	6M
System	
Local interface	LCD + control buttons
Remote management	Web NMS
output	ASI out (BNC type);
	4*SPTS out (RJ45, 100M)
NMS interface	RJ45, 100M
Language	English
General	
Power supply	AC 100V~240V
Dimensions	482*400*44mm
Weight	5 kgs
Operation temperature	<b>0~45</b> ℃

### **1.4 Schematic Overview**

The Links between Programs and Carriers

# **1.5 Principle Chart**

# **1.6 Typical Application of 4 \* Carrier Outputs**

As we all know, to guarantee the picture quality of 1920x1080@50I/60I resolution HD program, the video bit-rate may exceed 10 Mbps, and even reach up to 15Mbps. However, when the modulating constellation is 64QAM (with 6MHz bandwidth), the maximum possible bit-rate output for single DVB-C carrier is only around 20Mbps.

15Mbps x4 = 60Mbps > 20Mbps.

It means the single DVB-C carrier simply can't carry the 4 channels 1080i HD program if the average bit-rate exceeds 10Mbps.

That's why we design 4\*DVB-C carrier modulation board which quadruples the maximum possible bit-rate bandwidth up to 80Mbps and above when 64QAM constellation is used. This rightly makes it reliably carry 4 channels MPEG2 HD programs output simultaneously.

Below brief chart will help to more clearly illustrate the working principle.

# **1.7 Appearance and Description**

Front Panel Illustration

- 1) SDI Module 1: SDI input port 1&2
- 2 SDI Module 2: SDI input port 3&4
- ③ RF in port (for combiner use)
- ④ RF out port
- **(5)** ASI input port
- 6 ASI output ports

# **Chapter 2 Installation Guide**

This section is to explain the cautions the users must know in some case that possible injure may bring to users when it's used or installed. For this reason, please read all details here and make in mind before installing or using the product.

# **2.1 General Precautions**

- $\checkmark$  Must be operated and maintained free of dust or dirty.
- ✓ The cover should be securely fastened, do not open the cover of the products when the power is on.
- $\checkmark$  After use, securely stow away all loose cables, external antenna, and others.

# 2.2 Power precautions

- $\checkmark$  When you connect the power source, make sure if it may cause overload.
- ✓ Avoid operating on a wet floor in the open. Make sure the extension cable is in good condition
- $\checkmark$  Make sure the power switch is off before you start to install the device

# 2.3 Device's Installation Flow Chart Illustrated as following

# 2.4 Environment Requirement

ltem		Requirement
Machine	Hall	When user installs machine frame array in one machine hall,

. . . . . . . . . .

. . . . . . . . . . . . . . .

Space	the distance between 2 rows of machine frames should be $1.2 \sim 1.5$ m and the distance against wall should be no less than $0.8$ m.
Machine Hall Floor	Electric Isolation, Dust Free Volume resistivity of ground anti-static material: $1X10^7 \sim 1X10^{10}\Omega$ , Grounding current limiting resistance: $1M\Omega$ (Floor bearing should be greater than $450 \text{Kg/m}^2$ )
Environment Temperature	5~40°C(sustainable), 0~45°C(short time), installing air-conditioning is recommended
Relative Humidity	20%~80% sustainable 10%~90% short time
Pressure	86~105KPa
Door & Window	Installing rubber strip for sealing door-gaps and dual level glasses for window
Wall	It can be covered with wallpaper, or brightness less paint.
Fire Protection	Fire alarm system and extinguisher
Power	Requiring device power, air-conditioning power and lighting power are independent to each other. Device power requires AC 110V $\pm$ 10%, 50/60Hz or AC 220V $\pm$ 10%, 50/60Hz. Please carefully check before running.

## **2.5 Grounding Requirement**

- ✓ All function modules' good grounding is the basis of reliability and stability of devices. Also, they are the most important guarantee of lightning arresting and interference rejection. Therefore, the system must follow this rule.
- ✓ Grounding conductor must adopt copper conductor in order to reduce high frequency impedance, and the grounding wire must be as thick and short as possible.
- ✓ Users should make sure the 2 ends of grounding wire well electric conducted and be antirust.
- $\checkmark$  It is prohibited to use any other device as part of grounding electric circuit
- ✓ The area of the conduction between grounding wire and device's frame should be no less than 25 mm<sup>2</sup>.

# **Chapter 3 Operation**

# 3.1 LCD Menus

## **3.2 Initial Status**

Switch on the device and after a few seconds' initialization, it presents start-up pictures as below:

- **Cable**: indicate the modulation standard of this device is DVB-C.
- A: the symbol of different carrier output. "*A*", "*B*", "*C*", and "*D*" alternate constantly with the following output frequency.
- XXX.XX MHz indicates the current output frequency (range: 30~960MHz) of its corresponding carrier output.
- P1: Program 1; P2: Program 2; P3: Program 3; P4: Program 4
- X.XX Mbps: indicate the encoding bit rate of each channel respectively.

### 3.3 General Settings for Main Menu

Press "Lock" key on the front panel to enter the main menu. The LCD will display the following pages where user can configure the parameters for the device:

User can press UP/DOWN buttons to specify menu item, and then press ENTER to enter the submenus as below:

#### 1) Alarm Status

The alarm indicator will turn on if there is no A/V signals inputting or outputting bit rate overflows. User then can enter this menu to check the error type.

#### 2) Encode Setting

Under this submenu, the LCD will show "2.1 Input 1", "2.2 Input 2" and "2.3 ASI".

Under submenus 2.1 or 2.2, user could set the video encoding format and bit rate, and

set audio encoding bit rate and also read the audio encoding format of the program from the SDI input.

"Video Format": the encoding module supports both MPEG2 and MPEG4 AVC/H.264 formats. Move the triangle mark with LEFT/RIGHT keys to specify the intended format and press ENTER to confirm.

"Video Bit Rate": Move the underline with LEFT/RIGHT keys and modify the value of frequency with UP/DOWN keys, and press ENTER key to save the settings.

"Audio Format": the encoding module supports MPEG2 audio format. This is a read-only interface for checking.

"Audio Bit Rate" is to select audio encoding bit rate from the options provided.

.........

Under submenu 2.3, user could parse the inputting programs and select the programs to output.

"Parse Program" is for checking the quantity of input programs from the corresponding Tuner input.

"Select Program A" is for selecting programs from the ASI IN to output through Carrier A. Move the triangle mark to specify the program and press RIGHT/LEFT keys to shift the mark between " $\sqrt{}$ " and "X". (" $\sqrt{}$ ": to output the corresponding program; "X": not to output the corresponding program)

**REMARK**: "Select Program B/C/D" shares the same explanation with "Select Program A".

#### 3) Modulator Setting

When entering "Modulator Setting" submenu, user can find below different parameters can be set and the LCD window would show as below:

As the HP852A (DVB-C Modulating) is with 4 carrier outputs, "3.1"-"3.4" represent the

\_\_\_\_\_

"Carrier A", "Carrier B", "Carrier B", and "Carrier D" respectively. User can enter "3.1"/"3.2"/"3.4"/"3.4" to set the corresponding modulating parameters. Submenus (taking "3.1" as an example) are as below:

#### Standard

There are three possible options provided for selecting **Standard**: J.83A (DVB-C), J.83B, J.83C when the display shows them, user just need swift LEFT and RIGHT key to choose.

#### > Constellation

Three different constellations: J.83A (DVB-C), J.83B, J.83C will show on the LCD window when Constellation been entered.

J.83A (DVB-C) contains 16QAM, 32QAM, 64QAM, 128QAM, and 256QAM;

J.83B contains 64QAM, 256QAM;

J.83C contains 64QAM, 256QAM.

16QAM: Quadrature Amplitude Modulation is 16

32 QAM: Quadrature Amplitude Modulation is 32

64QAM: Quadrature Amplitude Modulation is 64

128QAM: Quadrature Amplitude Modulation is 128

256QAM: Quadrature Amplitude Modulation is 256

Setting method is just the same. When the display shows them, user just need swift LEFT and RIGHT key to choose and repressing "ENTER" for confirm.

#### > Symbol Rate

The symbol rate range of both J.83A (DVB-C) & J.83C is 5Msps to 9Msps and J.83B is fixed and cannot be changed.

#### > **RF Frequency**

The RF output frequency range is from 30 to 960MHz with 1K stepping. After entering the RF frequency setting submenu, users the can press LEFT, RIGHT, UP, and DOWN buttons to adjust the frequency and confirm by press ENTER button.

RF Frequency <u>7</u>50.000 MHz

#### RF out level

The RF attenuation range is from  $-30\sim-10$ dbm ( $81\sim97$ dbµV) with 0.1db step. After entering this setting submenu, user can shift UP/DOWN/LEFT/RIGHT key to set the output level and press ENTER to confirm.

RF Out Level	
- <u>1</u> 0.0 dbm	
<	

#### > RF On

This interface is to decide whether to enable the RF (carrier A) output or not.

**OFF**: to disable programs to output through carrier A.

**ON**: to enable programs to output through carrier A.

NOTE: The setting principle of "3.2", "3.3", and "3.4" are the same with "3.1" explained above.

#### **ASI Output:**

HP852A encoder & modulator (DVB-C Modulating) is with quad-carrier output: Output A, B, C, and D.

----

Output A: the ASI output programs are same as carrier output A. Output B: the ASI output programs are same as carrier output B. Output C: the ASI output programs are same as carrier output C. Output D: the ASI output programs are same as carrier output D.

### 4) IP Output Setting

HP852A encoder & modulator (DVB-C Modulating) is with quad-carrier output (Output A, B, C, and D), "4.1" to "4.4" are for the settings of the 4 carrier outputs respectively. Submenus go as 4.1.1-4.1.7

User can enter 4.1.1 to decide whether to turn the IP port on or off, and enter to the rest menu items to set the corresponding parameters.

#### 5) Network setting

After enter Network Setting, there are three submenus shows as the following LCD

displays.

User can press "UP/DOWN" to choose this item and "ENTER" & "LEFT/RIGHT" to set the parameters.

NOTE: The MAC address is according to the factory setting, and it is unique.

#### 6) Saving Configuration

Users can enter Saving Configuration submenu for saving settings. Choose yes and press ENTER to confirm.

#### 7) Loading Configuration

At this menu, user can press UP/DWON key to select and repress ENTER to confirm. User can restore the device into the last saved configuration by choosing "7.1" and restore the device into factory configuration by choosing "7.2" the display will show as below:

#### 8) Version

. . . . . . . . . .

User can check the software version and hardware version of this equipment under this submenu.

\_ \_ \_ \_ \_ \_ \_ \_ \_ \_ \_ \_ \_ \_ \_ \_ \_ \_ \_

# **Chapter 4 WEB NMS Operation**

User not only can use front buttons to set configuration, but also can control and set the configuration in computer by connecting the device to web NMS Port. User should ensure that the computer's IP address is different from the HP852A's IP address; otherwise, it would cause IP conflict.

#### 4.1 login

The default IP address of this device is 192.168.0.136. (We can modify the IP through the front panel.)

Connect the PC (Personal Computer) and the device with net cable, and use ping command to confirm they are on the same network segment.

I.G. the PC IP address is 192.168.99.252, we then change the device IP to 192.168.99.xxx (xxx can be 0 to 255 except 252 to avoid IP conflict).

Use web browser to connect the device with PC by inputting the Encoder & Modulator's IP address in the browser's address bar and press Enter.

It will display the Login interface as Figure-1. Input the Username and Password (Both the default Username and Password are "admin".) and then click "LOGIN" to start the device setting.

	Internet			
	Username:	admin 🐨		
	Password:		COGIN	
		Default User:admin Default Password:admin		
			F @2011	
igure-1				

# 4.2 Operation

When we confirm the login, it displays the WELCOME interface as Figure-2.

## Input 1

----

From the menu on left side of the webpage, clicking "Input 1", it displays the information of the 2 programs from the 1<sup>st</sup> SDI encoding slot as Figure-3.

Figure-3

### Enable or Disable the Carrier Output Function:

Program Out Enable (ABCD)		
	<b>*</b>	↓

The 4 boxes respectively represent Carrier A, B, C, and D. Tick the corresponding box(es) to enable the related program output through the corresponding Carrier. One program can output through a single or multiple Carriers. However, it is suggested that a single carrier outputs only one program to adapt the fluctuant encoding bit rate.

#### NOTE

The different combination of **Video Format**, **Video Bit-rate**, **Low Delay Mode** and **the Resolution** of signal source will have an impact on the delay. Please refer to the **Appendix** attached for detailed information.

...............

Help For user to turn to refer detailed explanation of terms on this interface

**Default** Click this button to apply the default setting of Input 1

Apply Click this button to apply the modified parameters.

### Input 2

Similarly, from the menu on left side of the webpage, clicking "Input 2", it displays the information of the 2 programs from the  $2^{ed}$  SDI encoding slot.

# **ASI Input**

Click "ASI Input", it will display ASI input program information as Figure-4.

Welcome      Parameter     ICH ASI Configuration (EN06)      Input 1     Input 2     ASI Input     NIT     IIP Output     Welcome     With the set of the set o	Web Management

Figure-4

 $A \odot B \odot C \odot D \odot$  Select the carrier output channel for the multiplexed programs.

Passthrough If this item is selected, all the input programs will pass through without any elimination.

• Multiplex Selecting this item to allow user select programs as required to output.

Refresh Input Click "Refresh Input" to refresh the input program list.

Refresh Output Click "Refresh Output" to refresh the output program list.

Select Program When user checks one input program with " $\sqrt{}$ ", one can transfer the checked program to the right box to output.

Here user can select the programs which we want to output or we can output all the programs.

Cancel Program Similarly, user can cancel the multiplexed programs from the right box.

All Input & All Output to select all the input/output programs with one-time clicking.

Parse timeout 200 seconds Time limitation to parse the input programs

**FID** Pass Click this button to trigger a dialog box as below, where to add the PIDs which need pass through.

In some occasions, there are some PIDs which won't belong to any program, such as EPG, NIT tables and so on which user just wants to pass them through the multiplexing module without changing anything. This is the main purpose of this function.

🗿 PID Pass 岡文)	<b>计话框</b>				2

# **Chapter 5 Troubleshooting**

HIPRO's ISO9001 quality assurance system has been approved by CQC organization. For guarantee the products' quality, reliability and stability. All HIPRO products have been passed the testing and inspection before ship out factory. The testing and inspection scheme already covers all the Optical, Electronic and Mechanical criteria which have been published by HIPRO. To prevent potential hazard, please strictly follow the operation conditions.

#### **Prevention Measure**

- Installing the device at the place in which environment temperature between 0 to 45 °C
- Making sure good ventilation for the heat-sink on the rear panel and other heat-sink bores if necessary
- Checking the input AC within the power supply working range and the connection is correct before switching on device
- > Checking the RF output level varies within tolerant range if it is necessary
- Checking all signal cables have been properly connected
- Frequently switching on/off device is prohibited; the interval between every switching on/off must greater than 10 seconds.

#### Conditions need to unplug power cord

- Power cord or socket damaged.
- Any liquid flowed into device.
- Any stuff causes circuit short
- Device in damp environment
- Device was suffered from physical damage
- Longtime idle.
- > After switching on and restoring to factory setting, device still cannot work properly.

Maintenance needed

# **Chapter 6 Application**
